Here is a sample slide that shows what *itemized* and *enumerated* lists look:

- | | |
|-------------------|---------------------|
| ■ itemized item 1 | 1 enumerated item 1 |
| ■ itemized item 2 | 2 enumerated item 2 |
| ■ itemized item 3 | 3 enumerated item 3 |

The sample code also defines 2 columns.

The \LaTeX package `textpos` makes it possible to put text objects in arbitrarily prescribed places.

With floating text, you define the environment name, font size, type, and color.

In this example, The reference environment is created to take two input arguments, which specify x and y text position.

Slide coordinates are defined relative to the top left corner. A Beamer slide has dimensions 128mm by 98mm. Trial and error ensures the ad-hoc text lands where you want.

Example below:

V. Jikov, S. Kozlov and O. Olenik, Homogenization of differential operators and integral functionals, Springer, 1994.
